Essential cyber resilience and legal protection have come together in one place

Today, the danger of your organisation and extended supply chains being hacked is greater than ever.

For SMEs through to large organisations, it's critical that you're on the front foot. Cyber threats evolve daily, like a virus, finding new weaknesses and ways of hitting your business; so policies and procedures need to be updated constantly. The impact of a hack can be severe, from reputational damage to the complete crippling of all operations, as well as the potential for corporate and personal fines at board level.

Digital Assurance as a Service meets the challenge head-on

IT, technology and legal teams often work in silos rather than collaboratively, which can leave gaps in an organisation's cyber defence strategy. That's why BPE has partnered with Cheltenham based Bamboo Technology Group to create an innovative, integrated technical and legal service that builds your cyber resilience, helps blunt attacks and deflects financial and reputational risk.

- Lessen the impact of cyber incidents
- Reduce risk to reputation
- Reduce the potential for fines
- Benefits to business insurance
- Decrease the risk of litigation
- Decrease damages claims from customers and suppliers

Bamboo's technical diagnostics are seamlessly combined with BPE's legal diagnostics in this cyber assurance solution, boosting the overall level of security of the network and information systems critical to your organisation.

The impact of a hack can be severe, from reputational damage to the complete crippling of all operations

Turning technology to your advantage

- Automated diagnostic tool for an audit, plus threat and vulnerability assessments
- Full governance review ensures the right roles and responsibilities are allocated appropriately
- Incident simulations
- Suitable policies, procedures, training and validation put in place
- Follows UK Government and NCSC guidelines as best practice
- Supply chain control diagnostics across material contracts

Making the legal aspect of cyber risk management watertight

- Contracts reviewed and upgraded across entire supply chain
- Evidence logs provide tangible proof that controls, processes and contracts are fit for purpose

Show customers that you control your supply chains; regulators that you are compliant; insurers that you have fulfilled the conditions of your cyber risk policy, and the world at large your best practice in the cyber realm.
